

STORUMAN

NORDIC LOGISTIC CENTER

– Intermodal logistics hub
in northern Scandinavia

Transshipment terminal in Storuman – a work in progress

Nordic Logistic Center in Storuman is an intermodal transport hub in northern Scandinavia. The terminal, inaugurated in 2012, offered expansive hardened loading surfaces and three separate tracks for loading/transfer.

Interest in the terminal is constantly increasing and work continues on increasing the terminal's role within the transport network. We have begun construction of a triangle track network facilitating transfers to and from the Inlandsbanan railway. The track should be operational by 2021 at the latest.

We provide:

- Spaces and storage facilities tailored to customer needs
- Measurements and weighing
- Office facilities
- Loading and unloading services
